Remember Location x

I double-click the grip bar (can't remember the name right now... I'm a bit tired :P) in order to roll-up the New Stickie...

When I double-click the grip bar to roll-down the New Stickie, it returns to where it was when last rolled-down.

Now I can move the  
rolled-down Stickie to  
wherever I want it to be  
when rolled-down. When  
I double-click it, it will  
return to where it was  
when last rolled-up.

Remember Location x

In case I didn't made myself clear on the beneficts of this functionality, consider all the rolled-ups Stickies on the right. I can roll-down any of them and it doesn't disturb my access or perception of the others as much as it does with the current functionalities.

Remember Location x

You could set a Style or individual Stickies to 'Remember Locations' simply by right-clicking the grip bar and selecting your choice... This isn't really an 'original' idea; one of my favorite programmes, Macromedia FreeHand, used to have this functionality which allowed for an improved organization and access to the panels and stuff... and I remembered it when I started organizing Stickies throughout my desktop and how much I'd love to have that functionality implemented here :)
